

GREENHOUSE SECTION

Sep 17 2004

Q.1. Most scientists believe that global warming is mostly caused by greenhouse gas emissions from the burning of oil, gas, and coal by industries, vehicles, and households. Under the international Kyoto Protocol, all Canadian greenhouse gas emitters will have to reduce their greenhouse gas emissions by 30% ON AVERAGE by the year 2010. The government is proposing that major industries will have to reduce their emissions by 15%. In your view, is the 15% target for major Industries:
