

To protect our climate and grow the clean economy

# B.C. needs to reduce carbon pollution from buildings

This means **every year** B.C. needs to retrofit:

**30,000**  
homes

**17,000**  
apartment units

**3 million m<sup>2</sup>**  
commercial space

## How do these goals

compare to what B.C. has previously achieved?

LiveSmart BC rebates (2008–2014)  
retrofitted **10,000** homes/year

average **25%**  
less carbon pollution per home

Between now and 2050, B.C. needs to  
retrofit **30,000** homes/year

average **60%**  
less carbon pollution per home

B.C. needs a low-carbon buildings strategy
