

# GROW THE ECONOMY AND CUT CARBON POLLUTION

**Resolution B83** calls for a return to annual \$5-per-tonne carbon tax increases, with new revenues invested in local projects that reduce carbon pollution.

Resolution sponsored by New Westminster and endorsed by the Lower Mainland Local Government Association.

# GROW THE ECONOMY AND CUT CARBON POLLUTION

Returning to annual increases in the carbon tax and investing in local climate solutions would:

- **Grow the economy** by an average of 2.1% (GDP) per year
- **Create 850,000 new jobs**
- **Reduce B.C.'s carbon pollution** by 2.1 million tonnes

The new revenue (\$18.7 billion from 2018 through 2030) would be enough to:

- Add two **rapid transit lines** and 20 **express bus routes**, and put 300,000 new **electric vehicles** on the road
- **Upgrade** over half a million homes to be more energy efficient
- **Build** over half a million new ultra energy efficient homes and buildings
- **Divert** 95% of organic waste
- **Increase** low-income and northern/rural tax credits

Based on analysis conducted by Navius Research, modelling a scenario that included annual \$5-per-tonne increases from 2018 through 2030.
